Education

Erciyes University Oct 2022 - June 2026
Bachelor of Computer Engineering
I completed 2022-2023 Erciyes University as the valedictorian of the semester and was awarded an outstanding achievement scholarship.(3.72 gpa)

Technical Skills

Languages: C#, C, Pyhton, Java, Dart
Frameworks: Flask, Spring, ASP.NET Core, Flutter
Technologies: Unity, Git, Cloudflare, Ardunio

Experience

Software Engineer at CAL TÜBİTAK, Düzce Metropolitan Municipality Apr 2019 - Oct 2020

- I have taken an important role in the application that graphs the growth rate in optimal conditions that are most efficient for plant using Phyton.
- Placed first in the region Düzce by TÜBİTAK.

Network İntern at Posco Assan TST 04.08.2025-29.08.2025

- Configured and troubleshooted Cisco Catalyst 2960S / 3560 / multilayer switches within enterprise network infrastructure.
- Upgraded Cisco IOS using SolarWinds TFTP and XMODEM after performing ROMMON recovery and factory reset.
- Implemented VLANs, Port Security (sticky MAC), and SSH (v2) for secure network segmentation and remote access.
- Designed a multi-site WAN topology (Kocaeli–Istanbul–Korea) using Cisco Packet Tracer with EIGRP and DHCP configurations.
- Applied Inter-VLAN routing, Spanning Tree (PVST+), and Port-Channel (LACP) to enhance redundancy and performance.
- Practiced NAT, ACL, and CEF for optimized routing, access control, and packet forwarding.
- Worked with SFP modules, stacking, and fiber cabling (SMF/MMF) for high-speed, scalable network design.

Undergraduate Researcher and Software Engineer at Fermilab Feb 2024 – Present

- Studying Artificial Intelligence, Machine learning, Deep Learning and Data Science.

Software Development Intern at BILSOFT SOFTWARE COMPUTER TRADE LTD. 18.01.2026 – 13.02.2026

- Designed and developed a cross-platform **Agenda Module** using **Flutter**, ensuring full mobile compatibility to replicate desktop software functionality.
- Implemented secure user authentication (Tax ID, Username, Password) and managed session states for firm/period selection using **RESTful APIs**.
- Built core productivity features including event reminders, push notifications, and a comprehensive note-taking system.
- Managed backend data operations and database structures using **MySQL** (SQLyog).
- **Technologies:** Flutter, Dart, MySQL, REST API, JSON.

Software Development Intern BILSOFT SOFTWARE COMPUTER TRADE LTD. 22.07.2024 - 28.08.2024

- Developed and maintained accounting software used by clients.
- Contributed to optimizing program performance and fixing bugs.
- Collaborated with the development team to ensure the stability and efficiency of the software.

Contract Software Engineer at Kuantum Teknolojileri 11.07.2024 - Present

- Contributed significantly to key milestones in an ongoing TÜBİTAK project which was presented in Silicon Valley.

• Assisted in research and development, utilizing Ardunio for various technical tasks.
• Played a key role in developing a mobile application for Düzce University using Flutter and Dart.
• Integrated backend API support to enchance the functionality and performance of the application.

PROJECTS

Gym Management System

• Developed a programme that controls the membership dates of the members in the gym from their training to their bmi's and their purchases in the gym using C#.
• Designed and programmed the admin panel.
•**Technologies:** C#, Phyton

MoodFood

• Developing a mobile application that suggests meals based on the user's mood by analyzing menus by AI.
• Built the app using Flutter, Dart, and integrated API support.
• Created an AI chatbot using GPT-3 (ollama3) technology and trained it using TensorFlow and Python.
• The project is still in development and aims to offer personalized food recommendations.
•**Technologies:** Phyton, Dart, Flutter, Mathlab

QR Code Menu & Stock Tracking System

• Developed a software for a restaurant that uses QR codes for menu display, order placement, and payment processing.
• Implemented stock tracking to monitor weekly sales and manage inventory.
• Designed and developed the admin panel with features for adding, updating, and managing menu items, along with an integrated firewall for enhanced security.
• Integrated payment and order tracking functionalities, allowing real-time management and reporting.
• **Technologies**: C#, MySQL, ASP.NET Core, HTML, CSS

Exys – Auto Expertise Management System

(Django, Python, HTML, JavaScript)

• Developed a full-stack auto expertise management system used by multiple car inspection companies.
• Built backend services using Django and REST API architecture for report generation, customer data management, and authentication.
• Designed responsive HTML/CSS/JS interfaces for technicians and administrators to manage inspection reports efficiently
• Integrated dynamic data visualization, PDF export, and multi-user access control for scalable company operations.
• Technologies: Django, Python, HTML, JavaScript, Bootstrap, SQLite/PostgreSQ

Real vs. Fake Image Classification with Explainable AI (Grad-CAM)

•Developed a deep learning pipeline using **PyTorch** and **Transfer Learning (VGG19)** to classify real vs. AI-generated images with high accuracy.
•Implemented advanced **data augmentation** techniques (RandomResizedCrop, ColorJitter) and optimized hyperparameters to enhance model generalization.
•Integrated **Grad-CAM** (Gradient-weighted Class Activation Mapping) to visualize model attention heatmaps, providing interpretability for model predictions.
•Utilized **Scikit-learn** for generating classification reports and confusion matrices to evaluate model performance metrics.
•**Technologies:** Python, PyTorch, OpenCV, Scikit-learn, Matplotlib, Torchvision
